

Scientist (m/f/d)

Preclinical development

About us

Ariceum Therapeutics GmbH is a rapidly growing clinical stage oncology company focused on developing next generation radiopharmaceutical oncology products. The current product pipeline includes satoreotide, a novel potent peptide antagonist with high affinity for tumour cells expressing SST2 receptors. Satoreotide is being developed into products with complementary therapeutic and diagnostic imaging opportunities in a range of solid tumours. Ariceum Therapeutics GmbH aims to develop further therapeutic candidates to expand its radiopharmaceutical oncology pipeline. The company is headquartered in Berlin and has employees in a number of European countries, including Germany and the UK.

The group *Translational Biology & Non-Clinical Pharmacology* has an immediate opening for the following permanent position:

Main Responsibilities and tasks

- Design, plan, prioritize, perform, evaluate, and document preclinical studies for the characterization of radiopharmaceutical development candidates
- Establish and optimize novel *in vitro* methods and processes
- Supervise studies (*in vitro*, *in vivo*) performed by contract research organisations
- Work with radiolabelled, genetically modified and biological (Bio II) material in compliance with legal requirements and regulations
- Support and supervise technicians and master students
- Support collaborations with cooperation and academic partners
- Interpret and presents scientific results to the management as well as on conferences and scientific journals
- Write reports and assist in the preparation of regulatory documents (IB, IND, etc.)
- Develop and maintain a culture of teamwork and collaboration in a multidisciplinary environment

Who you are

- Degree in biology, biochemistry or a related field, PhD is an advantage
- Experience in preclinical development of radiopharmaceuticals, biologics, or small molecules
- Strong expertise in a variety of techniques of cellular biology (e.g. eukaryotic cell culture, proliferation assays, ELISA, western blot), flow cytometry, molecular biology and immunohistochemistry
- Experience in the establishment of *in vivo* mouse models and in the planning, supervision and evaluation of preclinical *in vivo* studies
- Excellent organizational and problem-solving skills
- Ability to work in teams as well as independently, expertise to instruct and train staff
- Sense of responsibility, critical and flexible thinking
- High degree of motivation to learn and develop professionally
- Strong communication skills in English, both written and spoken

Our culture and benefits

- Permanent position
- Flexible working models
- Possibility of mobile working
- Open, appreciative and innovative working atmosphere
- Continuous development opportunities
